

# 100% RECYCLED PLASTIC

---

Published on 27 August 2019

## 100% Recycled Plastic

From Spring 2020, Griffioen Wassenaar will supply their range of perennials in pots and trays, made of 100% recycled plastic. This is in conjunction with Modiform and avoids new plastics reaching the supply chain.

## 'Designed to Recycle'

Modiform's 'designed to recycle'-principle means the pots, as well as the trays, are also fit for re-use. Both companies are making a supreme effort for effective recycling and make explicit choices for the used commodities of their products.

## Minimum 5 times Usage

Stefan Verbunt (Assistant Director at Griffioen Wassenaar) said: "Our goal is to use the plastics at least 5 times. Because of this, less commodities are needed and plastics will not become part of the environment."

## Sustainable Production

Menno Krijger (Sales Director at Modiform) said: 'Sustainable production is in our DNA and we are always looking to achieve more sustainability on all fronts. From Design up to recycling, so for that reason we enter into co-operations both within and outside the sector.'
